THE IMPORTANCE OF HEALTHY AGEING

Encouraging a balanced diet, regular physical exercise, remaining socially active, and avoiding certain behaviours like smoking have been shown to reduce one's chance of developing a variety of chronic diseases. These behaviours have also been shown to extend an individual's overall life expectancy by as many as 5 more years.

Healthy Ageing is more than just living longer, but also about enabling us to maximize our quality of life as we age.

WHAT YOU CAN DO TO ENABLE HEALTHY AGEING

There are many things you can incorporate into your daily activities that can enable healthy ageing:

- A Balanced Diet
- Avoiding Smoking
- Drinking Alcohol in Moderation
- Regular Physical Exercise
- Regular Sleep and Rest
- Managing Stress
- Getting Recommended Vaccinations
- Maintaining Social Networks and Keeping Active in Social Activities/Outings
- Staying in Contact with your Health Care Provider

NUTRITION TIPS FOR OLDER ADULTS

As you get older, your nutrient needs change. You may need to change your daily eating habits to ensure you are maintaining a healthy weight. If you are not as physically active, you may also need to eat fewer calories by eating balanced meals with nutrient-rich foods.

MAINTAINING HEALTHY WEIGHT

- Eat regularly by having three balanced meals each day and adding small snacks between meals.
- Ensure you are eating nutrient dense foods. Limit high-fat and high-sugar foods.
- Eat foods high in dietary fibre.
- Reduce sodium (salt) to avoid water retention and high blood pressure (Less than 1,500 mg a day).
- Drink more water to keep hydrated, reduce constipation and improve digestion.

SERVING SIZES

How many servings of each food group you should eat each day:

Fruits & Vegetables
Serving Size: 1 fruit, 1/2 cup vegetables

- 7 Servings for Males
- 7 Servings for Females

Grain Products
Serving Size: 1/2 bagel, 1 slice of bread

- 7 Servings for Males
- 6 Servings for Females

Milk & Alternatives
Serving Size: 3/4 cup yogurt, 1 cup milk

- 3 Servings for Males
- 3 Servings for Females

Meat & Alternatives
Serving Size: 3/4 cup cooked legumes, 2 eggs

- 3 Servings for Males
- 3 Servings for Females

PLATE METHOD:

Use the plate method when planning meals. Fill 1/2 the plate with vegetables, 1/4 with meat/meat alternatives, and 1/4 plate with a starchy vegetable or whole grain serving.

RECOMMENDED VITAMINS & MINERALS

As you get older, it may become harder for your body to absorb the vitamins and minerals you need. A balanced diet (see page 3) can often give you all the vitamins and minerals you need.

You may find that even when eating balanced meals, your body is still not getting the right amounts of vitamins and minerals it needs. A low-dose multi-vitamin or supplement can help in these cases. Your health care provider may also recommend you take additional vitamin and mineral supplementation. Always check with your health care provider and pharmacist before starting supplements.

IMPORTANT VITAMINS & MINERALS

Vitamin/ Mineral	Amount Per Day	Sources
Vitamin D	Ages 50-70 = 600 UI Ages 70 & Older = 800 IU	2 cups of milk daily
Vitamin B₁₂	2.4 mcg	8oz soy milk = 3 mcg 3oz turkey breast = 1.5 mcg 1 cup non-fat yogurt = 1.5 mcg
Calcium	Ages 65-70 = Males 1,000 mg and females 1,200 mg Ages 70 & Over: 1,200 mg	3 servings of milk or milk alternatives
Iron	Males: 8 mg Females: 8 mg	1/2 cup beans = 2-3mg 1 cup green vegetables: 1-3 mg 3 oz beef = 2 mg

AVOIDING SMOKING

As an older adult, the long-term effects of smoking can be extremely dangerous. There is heightened risk for various health conditions such as cardiovascular disease, respiratory conditions, and cancer.

Quitting can be difficult, but it's never too late. For tips and resources on how to quit smoking, visit the Lung Association's website at www.lung.ca/quit

DRINKING IN MODERATION

If you choose to drink alcohol, only do so in moderation. Drinking too much alcohol can increase your risk of health problems, including memory loss and falls, or worsen current conditions in your later years. Men should have less than 15 drinks a week and no more than three per day.

Women should drink less than 10 drinks a week and no more than two drinks per day.

There are many benefits to reducing your alcohol consumption, some of which include:

- Reduced risk of heart disease and diabetes
- Increased energy and less feelings of fatigue
- Improved sleep
- Improved weight management as alcohol is high in calories

Many prescription medicines can be dangerous when mixed with alcohol. Always talk to your health care provider about your medications if drinking alcohol.

BENEFITS OF REGULAR EXERCISE

Regular physical activity and exercise are beneficial for staying physically and mentally healthy as we age. Regular exercise has proven long-term health benefits.

Older adults should aim to get 150 minutes of moderate to vigorous intensity aerobic exercise per week, in bouts of 10 minutes. There are many exercises or daily activities you can incorporate into your routine to stay healthy and active.

STAYING PHYSICALLY ACTIVE

You can incorporate the activities listed below into your routine to stay healthy and active:

- Walking
- Light Jogging
- Dancing Classes
- Water Aerobics
- Chair Exercises
- Yoga
- Stretching Exercises
- Gardening
- Walking your dog
- Taking the Stairs instead of the Elevator

DID YOU KNOW?

Climbing 20 flights
of stairs a week
reduces one's risk of
death by 10%

WHY IS REGULAR PHYSICAL ACTIVITY IMPORTANT?

Why is Regular Physical Activity Important for Older Adults? It:

- Gives You More Energy
- Promotes Mental and Cognitive Health
- Increases Physical Strength
- Promotes a more Restful Sleep
- Decreases Feelings of Fatigue
- Maintains/Improves Heart Health
- Reduces Feelings of Depression/Anxiety/Stress
- Improves Blood Sugar Control
- Maintains Bone Strength

REGULAR EXERCISE CAN HELP PREVENT FALLS

When you get older, you have a greater risk of falling or tripping. In fact, 1 in 3 older adults fall each year. This can cause serious injuries.

Exercising regularly can help prevent falls by:

- Making your Muscles and Bones Stronger and More Flexible
- Improving your Balance
- Improving your Coordination and Reaction Times

Did you know? Ontario has over 2,000 free exercise and falls prevention classes for older adults aged 65 and older.

Visit ontario.ca/healthcareoptions to find the closest exercise and falls prevention class in your community or call the Local Health Integration Network at 310-2222.

HOW TO SLEEP WELL AS YOU AGE

As we get older, we may find it harder to fall and stay asleep. Many older adults may feel less satisfied with the sleep they are getting and feel more tired during the day. The lack of quality sleep can affect your energy, emotions, and overall health.

DURING THE DAY

- Avoid large meals and drinking fluids a few hours before bedtime.
- Limit or eliminate alcohol, caffeine, and nicotine.
- Exercise regularly but not within 2 hours of your bedtime.
- Get adequate exposure to bright light during the day.
- Avoid napping.
- Get out of bed at the same time each morning.

HOURS OF SLEEP

There is no “right amount” of sleep. As we get older, our sleeping needs change. You may need to sleep less and feel just as rested.

DURING THE NIGHT

- Make sure your bedroom is quiet, dark, and cool to keep comfortable throughout the night.
- If it helps, use soothing noise (e.g. a fan, other appliance, “white noise” machine).
- Remove electronics from the room.
- Develop a sleep ritual (same routine each night before going to bed).
- If possible, avoid using sleeping aids and pills, such as Benadryl, Tylenol PM, and Nyquil, to help you sleep as many of these can increase your risk of falls.

RECOMMENDED VACCINATIONS FOR OLDER CANADIANS

Many older Canadians are at increased risk of developing preventable diseases. To avoid this, talk to your health care provider about the recommended vaccinations for older Canadians:

- Pneumonia (Pneumococcal)
- Shingles (Varicella/Herpes Zoster)
- Tetanus
- Yearly Flu Shot

MAINTAINING STRONG SOCIAL NETWORKS

Staying socially active and maintaining positive relationships can help you maintain your physical and emotional health.

You can stay social and active by:

- Volunteering in your community.
- Joining a group focused on activities you enjoy, such as an exercise class or book club.
- Taking classes or finding hobbies that keep you interested.
- Getting involved at your local older adults centre.
- Joining a local fitness centre to stay physically active.
- Staying connected with friends, family, or coworkers by phone, email, or in person visits as much as possible.
